

Process Simulation Cup

Have an impact. Be a leader. Become a Student Ambassador.

Process Simulation Cup Student Ambassador program is open to students from around the world. The ambassador can be a current chemical process engineering student: undergraduate, masters and postgraduate.

The ambassador raises the PSC awareness among students and academic staff to widen participation in the competition. He/She assists the Process Simulation Cup Team with outreach activities and seeks new and creative ways of engagement. The ambassador has a good knowledge of the PSC website and knows how to communicate the PSC content to the right audience (students and teachers).

The PSC Student Ambassador acts as a role model, actively engages with the PSC challenge and makes progress in the highscore table. The ambassador can choose how to promote the PSC according to own strengths, creativity and time schedule.

PSC Student Ambassador makes an impact through:

- Introducing teachers, teacher assistants, students or an entire class to the competition and other PSC related initiatives.
- Organizing a PSC themed student event/ campaign.
- Blogging and Social Media campaigns.
- Sharing “My PSC referral link” with others to collect PSC Cups.
- Demonstrating leadership and creativity in promoting PSC.

The PSC Student Ambassador programme provides an excellent opportunity for students to gain valuable work experience, improving skills such as leadership and communication, win awards and gain recognition.

All PSC Student Ambassadors are recognized for their engagement and contribution by being introduced to the Hall of Fame and Meet the Team pages on the PSC website.
